PROFESSIONAL SUMMARY

Senior Mobile Application Engineer with 5+ years of experience specializing in high-performance cross-platform development using **Flutter** and **Dart**, complemented by strong native **Android (Kotlin/Java)** and **iOS (Swift)** expertise. Proven track record in designing scalable mobile architectures using Clean Architecture, SOLID principles, and advanced state management (BLoC/Cubit, RxDart). Demonstrated success in engineering secure, large-scale applications across fintech, Web3, and EdTech domains, with a focus on performance optimization, robust CI/CD pipelines, and establishing scalable Design Systems.

TECHNICAL CORE COMPETENCIES

Languages: Dart, Kotlin, Java, Swift

Frameworks & Platforms: Flutter, Android SDK, iOS SDK

Architecture & Design: Mobile System Design, Clean Architecture, SOLID, Repository Pattern, Design Systems

Software Methodologies: Test-Driven Development (TDD), Domain-Driven Design (DDD), Specification-Driven Development (SDD), Agile/Scrum

State Management: BLoC / Cubit, RxDart, Provider, GetX

Backend & Cloud: REST APIs, WebSockets, Firebase, FCM, APNs, Push Notifications

Storage & Security: Secure Storage (KeyStore/Keychain), SQLCipher, Web3 Integrations

DevOps & Tools: CI/CD Pipelines, GitHub Actions, Dependency Injection (GetIt), Git Flow

PROFESSIONAL EXPERIENCE

Senior Mobile Application Developer | Systel Telecom (Digital Secure Systems) *2022 – Present*

- Architected and developed core modules for a high-security, large-scale digital banking application using Flutter, implementing Clean Architecture for improved maintainability and testing.
- Spearheaded a Design System initiative, engineering a modular UI component library that accelerated cross-functional feature delivery timelines by 30%.
- Optimized application state and reactive data flow using BLoC/Cubit and RxDart, ensuring fluid UI performance and efficient handling of high-frequency data payloads.
- Drove high engineering standards by enforcing SOLID principles, dependency injection, and comprehensive Test-Driven Development (TDD), significantly reducing production defects.
- Implemented automated CI/CD workflows using GitHub Actions to streamline testing and deployment processes across iOS and Android platforms.

Mobile Application Developer | RepoTec *2021 – 2022*

- Delivered production-ready Android and iOS applications tailored for complex laboratory tracking and reporting workflows, meeting stringent client requirements.
- Engineered high-performance networking layers integrating with secure REST APIs using Dio and custom interceptors, improving data fetch reliability and error handling.
- Translated complex Figma UI/UX designs into pixel-perfect, highly responsive layouts with smooth animations, enhancing overall user engagement.

Flutter Developer | Fritill (Part-Time / Contract) *2020*

- Accelerated MVP development for cross-platform startup products, establishing scalable foundations using Provider and GetX state management.
- Facilitated successful platform migrations and implemented reliable offline data caching strategies, significantly improving user experience in low-connectivity environments.

SELECTED TECHNICAL PROJECTS

TravMed – Medical Travel Hub (Flutter / iOS & Android)

- Developed a medical tourism gateway connecting international patients with providers, featuring real-time communications via WebSockets and secure scheduling.

Flip – Decentralized Web3 & Digital Banking (Flutter / iOS & Android)

- Built a robust decentralized finance (DeFi) application for secure asset transactions, applying deep state management principles for flawless transaction handling.
- Integrated Web3 protocols, digital wallet creation, and secured local encrypted databases (SQLCipher/KeyStore).

ALMO – English E-Learning Application (Flutter / iOS & Android)

- Engineered an interactive language platform integrating advanced Speech-to-Text (STT) and Text-to-Speech (TTS) modules for real-time pronunciation assessment.
- Developed a comprehensive examination module tracking user proficiency with sophisticated local state management.

Muslim Book – Global Islamic Utility (Flutter / Android)

- Scaled architecture to support over **1 million active global users**, optimizing background resource utilization and reducing battery consumption by 15%.
- Implemented advanced background task mapping and complex location-based geometric calculations.

EDUCATION & TRAINING

Intensive Cross-Platform Development Track | Information Technology Institute (ITI) 2020 – 2021

- Focused on deep mobile software engineering principles, advanced state management patterns, and multi-platform native integrations.

Bachelor's Degree in Computer Science | Mansoura University, Giza, Egypt 2016 – 2020

- Relevant Coursework: Software Engineering, Data Structures, Algorithms, Database Management Systems.
